What's going on with AM Reviews?

I had started this module a long time ago, in fact before AM Events, but it has been a long hard road with many breaks along the way. I have recently come back to it and after some fiddling, have come to the conclusion that it's a complete and utter mess.

What's going on with AM Reviews?

I had started this module a long time ago, in fact before AM Events, but it has been a long hard road with many breaks along the way ? I had to do some work to Articles and AM Events. But, I have recently come back to it and after some fiddling, have come to the conclusion that it's a complete and utter mess.

Honestly, it's my own fault as I started with little or no planning and just fumbled my way through, that and perhaps it was a little too ambitious as I was new to XOOPS module dev at the time.

As a result, I have more or less decided to start afresh. There are some bits of code I can carry over and most of the database can be used.

So, that's where things stand at present.

If you are interested in this module, please take the time to make suggestions for what you'd like it to contain in the AM Reviews support forums.
