XOOPS 2.0.14+ and Modules status

Modules

With the recent XOOPS 2.0.14 and 2.0.15 releases, there *may* be some compatibility issues.

I need to install these later versions of XOOPS on my test computer, but due to the fact that I'm currently overwhelmed with various tasks, this make take a while.

If you do identify a problem with Articles, AM Events, etc, could you please report them in their respective forums.
